WHC Financial Program

The WHC Financial Program aims to make the best use of fluctuation in the financial sector and to achieve a medium to high return with a manageable risk. We are moving in this program at a higher risk factor of 12% - 15% but also expect a return on the order of 30% - 60% per annum. The program is structured as follows:

- ➔ Futures are bought or sold out of the foreign exchange sector e.g. Euro / US Dollar
- ➔ To these futures, the opposing options are bought with the purchase price of the futures as a basis (when purchasing futures PUT options, when selling CALL options)
- ➔ Furthermore, shares of financial services companies and banks are bought or sold
- ➔ Again, these opposing options are purchased as a basis with the purchase price of the stock (when purchasing shares PUT options, when selling CALL options).

The breakdown of the total capital invested is as follows:

- ➔ Around 45% are traded in futures
- ➔ Around 10% migrate into future options
- ➔ Around 35% are moving into stocks
- ➔ And around 10% more in stock options

- Futures
- Future Options
- Stocks
- Stock Options

Legend:

Stocks	individual shares of a stock corporation
CALL option	is a commercial right to purchase a stock or future at a certain value in a given period
PUT option	is a commercial right to sell a stock or future at a certain value in a given period
Futures	are warrant transactions with a high leverage (low capital high yield / loss)
